CONTINUOUS LINER UNLOADING SYSTEM

The **CONTINUOUS LINER UNLOADING SYSTEM** is an easy to be operated, reliable handling and safe to use unloading system for dust-free filling of pharmaceutical compounds.

The system is composed by:

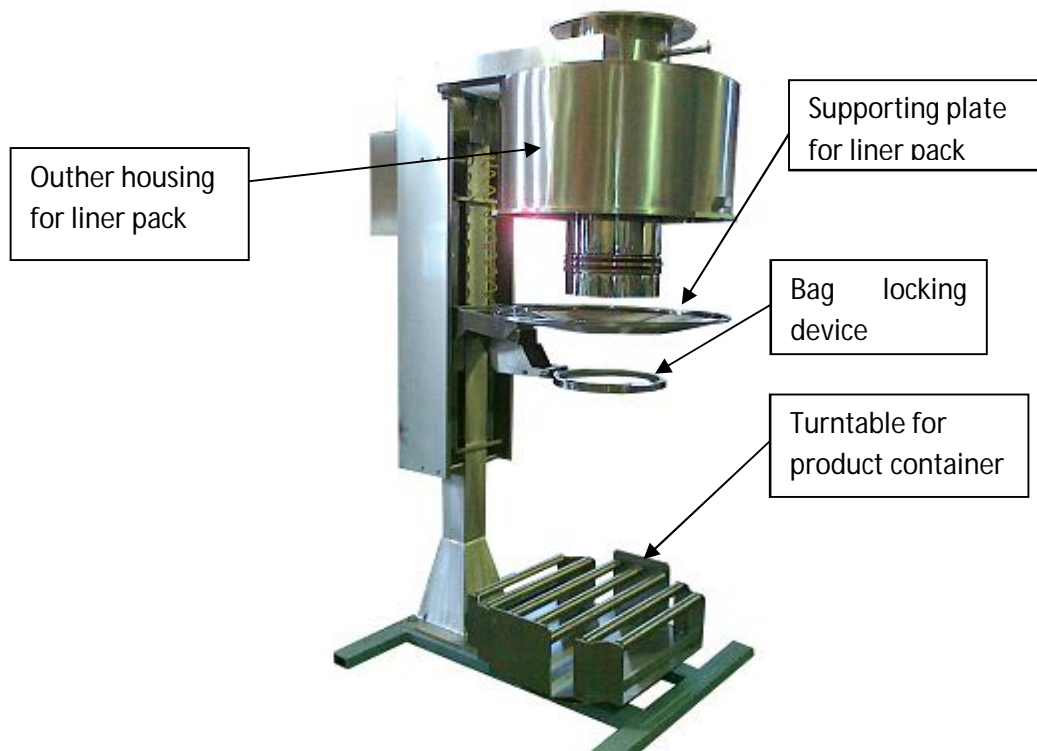

Supporting pipe with upper flange (different size available upon request) and double groove on the external part in order to allow the continuous liner fixing.

External cylindrical housing in Stainless Steel as protection for the liner pack (upon request)

Nozzle for nitrogen inlet and vent

Supporting plate, complete with **bag locking device**, with **inflatable gaskets** and **pneumatic cylinder with guides in order to allow the up and down of the supporting plate** , this solution grant an easier replacement of the liner pack

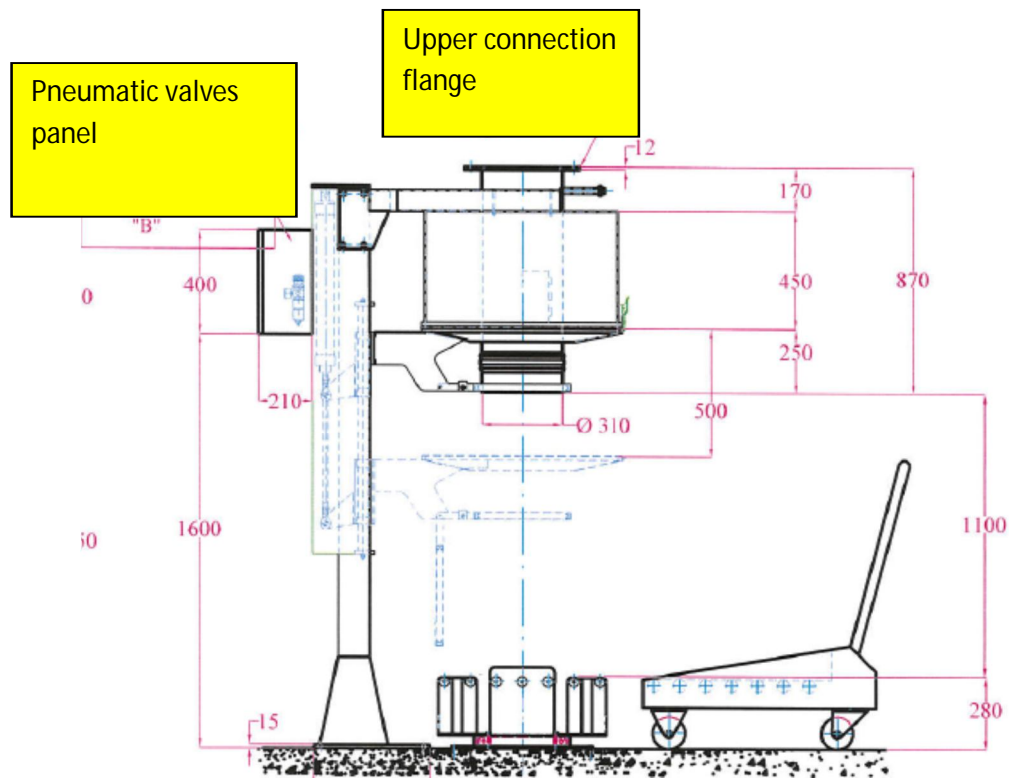

Pneumatic panel for the control of the bag locking device and of the supporting plate up and down movement

Available for installation in ATEX rated area 

Product contact parts in HASTELLOY upon request

Side view of the system

Pneumatic control panel
